

VEGALOG571 EP

Revision	Description	Available since
1.00	First sold version VEGALOG571 EP	06/2001
1.10	-Software update option with VVO -Sensor initialisation modified (due to mBar, ft measuring range) -Sensors are learnt automatically after identification -VVO communication to the sensor improved (e.g. false echo storage)	08/2001
1.11	-Sensor status replacement value in case of value (FailSafe reaction is now outputted as failure) -Fault eliminated in the boot part	10/2001
1.20	-Automatic addressing and learning of VEGA sensors improved	06/2002
1.30	-Integration of the following PLICS sensors: -VEGABAR -VEGAPULS -VEGAFLEX	06/2003
1.40	- Integration of the following PLICS sensors: -VEGASON	01/2004
1.50	-Profibus PA sensors acc. to Profile 3 are supported -Sensors with addr. 126 can now be readdressed -Measurement loops with input variable 'pF' for VEGACAL sensors are now supported	11/2005
1.51	Error correction: Interruption of the connection when saving false echo curves corrected	12/2006
1.60	-Integration of new sensors: plics@plus VEGAPULS sensors	05/2010
